

CREAGEN™

The World's Only Timed-Release Creatine!

CREAGEN™ is a scientifically engineered, advanced formula designed to help build muscle at the genetic level, triggering protein synthesis through its unique ingredient blend. CREAGEN™ is the world's first and only timed-release creatine supplement ever developed, utilizing a special pharmaceutically inspired delivery technology never before seen in the supplement industry! Designed for the bodybuilder, its effects have been shown to be 750 percent greater than ordinary creatine products for building muscle and increasing size. CREAGEN™ has been shown to increase the body's natural creatine levels in the muscle 15 times more than normal, triggering rapid increases in size and strength. And not only do levels of creatine elevate, but CREAGEN™ also works to maintain high levels of creatine concentrations, keeping the muscles in an anabolic state all day long. CREAGEN™ is the biggest breakthrough in sports supplementation and the most exciting development in muscle strength and size ever!

WHAT DOES CREAGEN™ DO?

CREAGEN™ contains ingredients not only to increase muscle size and strength but also to boost the body's own protein-building cycle to produce more muscle. CREAGEN™ provides the world's first disodium creatine phosphate tetrahydrate product, which helps sustain elevated creatine levels in the muscle cells all day long. Creatine works by providing muscle cells with the energy they need to perform more work, through the generation of adenosine triphosphate (ATP), our muscles' energy source. The result of supplementing with creatine is gains in muscle size and strength. It

has been shown in clinical studies that creatine can significantly increase lean muscle mass in as little as just two weeks. Creatine can also increase cell volumization through an increased flux of water into the muscles that occurs as a result of increased creatine concentrations, keeping the muscles full, anabolic, and tight. CREAGEN™ also provides a unique blend of RNA within the Ribonucleic Acid Complex 3, which works to help build muscle at the genetic level by triggering protein synthesis. In each cell, there are subcellular structures called ribosomes and ribonucleic acid (RNA), which are involved in protein synthesis. First, ribosomal RNA (rRNA) joins together as a group to make a polyribosome complex. This is the manufacturing site where proteins, and ultimately muscle tissue, are formed. Second, transfer RNA (tRNA) moves amino acids to the polyribosome complex so they can be made into proteins. Third, messenger RNA (mRNA) contains the genetic code of how to make a protein. Like an audiotape, mRNA runs across the polyribosome complex to synthesize proteins to form amino acids. In other words, CREAGEN™ simply boosts the body's own protein-building cycle to produce more muscle.

WHO SHOULD USE IT?

This product is designed for serious bodybuilders who are looking for serious results. CREAGEN™ is designed to deliver high creatine concentrations in the muscle all day long! The effects have been shown to be 750 percent greater than ordinary creatine products in building muscle size and increasing strength in the gym!

BENEFITS OF CREAGEN™

- **Sustained-Release Creatine:** This is the only product that contains unique, scientifically based sustained-release technology to enhance bioavailability and delivery of creatine.
- **Explosive Strength and Power:** It has been shown in clinical studies that creatine can significantly increase lean muscle mass in as little as just two weeks.
- **Builds Muscle and Increases Size:** CREAGEN™ has been shown to be 750 percent more effective than ordinary creatine for building muscle and increasing size.
- **Increased Creatine Concentration in the Muscle:** It has been shown to increase the body's natural creatine levels in the muscle 15 times more than normal.
- **Builds Muscle at the Anabolic Level:** This formula is scientifically engineered to help build muscle at the genetic level by triggering protein synthesis.
- **World's First Scientifically-Based Delivery System:** CREAGEN™ utilizes a proprietary process to coat creatine particles, exhibiting release profiles over 12 hours.

Q: HOW DO I TAKE CREAGEN™?

A: Take one scoop of CREAGEN™ in the morning and one scoop in the evening with 8 to 10 ounces of water. To increase creatine saturation, this product can also be taken 30 minutes prior to a workout. The product should also be taken on non-training days to maintain high levels of creatine in the muscle cells.

Q: HOW LONG SHOULD I USE CREAGEN™ BEFORE I SEE RESULTS?

A: It has been shown in many clinical studies that supplementing with creatine can result in muscle increases in size, strength, and volume of the muscle within as little as two weeks. For maximum benefits, be sure to take CREAGEN™ every day when first supplementing with this product to ensure you reach your upper limit of creatine in record time.

Q: WHAT MAKES CREAGEN™ DIFFERENT FROM OTHER CREATINE PRODUCTS?

A: CREAGEN™ is microencapsulated in a unique matrix that is the only one of its kind currently available in the dietary supplement industry. Each microparticle releases creatine and creatine analogues gradually in a consistent manner over a prolonged period of time. This proprietary process consists of heating and mixing USP stearic acid, which is a mixture of stearic and palmitic acids, with the active components of CREAGEN™ until well coated, and then cooling to room temperature until hard. The resultant particles are small and free-flowing, and exhibit release profiles that are released over 12 hours. The degradation often seen with typical creatine products is now a thing of the past! CREAGEN™ renders all other creatine products obsolete. CREAGEN™ is the most effective performance-enhancing muscle-building supplement ever developed!

Supplement Facts

Serving Size: 1 heaping scoop (20 g)
 Servings Per Container: 60

	Amount Per Serving	% Daily Value
Calories	24	
Total Carbohydrate	6 g	2%
Sugars	6 g	
TIMED-RELEASE CREATINE COMPLEX:	10,000 mg	**
Creatine Monohydrate		**
Creatine Ethyl Ester HCL		**
TriCreatine Malate		**
Creatine Alpha Ketoglutarate		**
Creatine Pyruvate		**
PROTEIN SYNTHESIS COMPLEX:	5,000 mg	**
L-Taurine		**
Stearic Acid		**
Ribosomal RNA		**
Transfer RNA		**
Messenger RNA		**
Taurine Ethyl Ester		**

** Daily Value Not Established

OTHER INGREDIENTS: FRUCTOSE, CITRIC ACID, MALIC ACID, ASCORBIC ACID, NATURAL AND ARTIFICIAL COLORING AND FLAVORING, SUCRALOSE, CALCIUM SILICATE.

Percent Daily Values are based on a 2,000 calorie diet ** Daily Value Not Established.
